How To Run Your Complete Hotel On Mobile PMS App.

The PMS app manages the front desk by using Modern frontdesk Capabilities, seeing what needs to be done each week. The PMS App feature manages room mapping, inventory, reservation delivery, channel pricing, credit card processing, and currency conversion. The booking engine App feature allows you to make direct reservations, commission-free.

Features on the list is a real advantage as most hotel PMS management systems are designed for large resorts and hotel groups - but for small establishments, this is our key features. The PMS App system processes room assignments for your employees as guests book, so the system knows how to manage staff around their holidays and availability. The check in and out process is automated. The PMS Cloud Consierge system allows you to identify opportunities to up-sell, which is non-invasive for guests but allows you to drive more revenue by offering Modern App useful services when necessary to guests.
